# WIHTE WINGED DUCK

The white winged duck is one of the largest living species of duck next to the steamer duck which is a lot heavier than this white duck. It is 66 to 81 cm in length and its wingspan 116 to 153 cm. It is also a very endangered species of duck which lives by swamps and moors. This poor creature has been extinct in most countries now it can only be found in back India (Zadna India)

# ASIAN ELEPHANT

- An Asian elephant can grow to 5.5-6.4 meters in length, and weigh 4,000-10,000 lbs (2-5 tons). The Asian elephant is an Endangered Species. It lives in the Southern part of back india (zadná india) also in sri lanka wich is pointed to now. They also travel around 300 miles a year (35 a day) in search of food and water.

# THE NORTHERN TREESHREW

The northern tree shrew is a very common mammal in southeast Asia as you can see on the map pretty much all-over the place. Its Latin name is *TUPAIA BELANGERI*. The northern tree shrew is one of the very first mammals in the world, it's a brown mammal with short furless ears and a wet nose. It is small enough to fit through a hole as small as a pencil.

# CRAB EATING MACAQUE

The crab eating macaque is very native to southeast asia mostly Indonesia that part. They are known to be pests in temples and thieves because they just love human food instead of what they were meant to eat, meaning that they eat anything. They adjust there living from the jungle to living in the cities or abandoned temples

# JAVA WART FROG

This crab eating frog *fejervarya cancrivora* Latin is very common in the southeast Asia including china Taiwan and also India and of course on the map Indonesia. You can find one in mangrove swamps and moors. It is the only amphibian that can tolerate sea water. Its nocturnal and hunts at night.

# KOA TAO ISLAND CAECILIAN

This poor fellas home was washed away so it migrated to southeast Asia all the way from Australia. It eats insects and lives under logs and there not that popular.

# COW TAIL STINGRAY

The cow tail stingray is very good at hiding from predators or jumping out at its pray because of its colour, Were it lives in the bays of Indonesia the water is clear but the sand is white so if you go swimming your unlikely to see it. Its not harmful to people just there pray so there's no need to worry. It feeds on small fish and plankton.

# INDOCHINESE GROUND SQUIRELL

- The ground squirrel (*Menetes berdmorei*) is found in Southeast Asia, from the east of Myanmar to Vietnam. The rarely known squirrel has a grey-brown back and a white belly. Most have stripes on the side - on each side one beige and black stripe. Its length is 20 cm with a 15 cm long tail. As a ground squirrel it is rarely found on trees, but spends most of the time in the thick bushy part of the rainforests.

# ORIENTAL HOUSE RAT

The oriental house rat is as small as a common mouse and can run as fast as a treeshrew it can be found in china Indonesia Taiwan java and Vietnam. It feeds on ants and steals rice from fields

# TOTO JE MOJ ZOO

- Dufam že sa ti to pači peto som sa snažil
